- People counting

Solution Background

Casino is a facility which accommodates certain types of gambling activities. There are high volume of people flow and changeable lighting in casino, but traditional cameras are not likely to produce clear image under this complicated environment. In addition, all equipments and systems used in casinos have to comply with the requirements of video surveillance standards from different countries and areas, aiming to help security officers protect guests, employees and valuable assets. Hence, casino video surveillance solution are facing a great challenge in reducing fraud and ensuring safety.

Starlink has been dedicating to the video surveillance industry for more than ten years, and accumulated rich experience and knowledge in casino video surveillance. And as a professional surveillance solution provider, Starlink casino video surveillance solution could be applied in all kinds of casino-related surveillance scenarios.
